Drag and drop

Marriage of Map and Data makes dispatching easy:

1. Open Geo-Dispatcher© to display all your open orders and your available fleet resources on your detailed color map.
2. Click on the order that needs to be dispatched and see the driving route between pickup and delivery. Another click and you are viewing all the details of that order.
3. Click on a nearby driver icon to see all the orders already assigned to that resource, as well as the path from his present location to the pickup/delivery points he still needs to visit. The operator clicks on each appropriate resource (driver), until the final selection is made.
4. Dispatch the order by clicking the order and then drag it to the selected driver icon and drop it.
5. ASCAR will then transmit all the data for that order to the driver - including the driving instructions.

The Icons tell it all:

Different icons represent different vehicle types, as well as packages onboard. The color of the icon represents the timeliness of the driver - ontime or running late.

Team Member of the ASCAR® Dispatcher Suite:

Your ASCAR® software package includes a suite of dispatch tools that perform many functions. Using "Dispatch" filters, you can filter orders to your screen, depending on location, type of service, time of day, and much more. This is a necessary tool when multiple dispatchers are utilized. Of course Geo-Dispatcher© takes this into account.

Geo-Dispatcher© provides the extraordinary dispatch skills required:

With Geo-Dispatcher© on your desktop, even your novice operator can make good dispatching decisions. This is an absolute essential tool for your dispatch room.
